

# Pro-Life Classroom Presentations

*offered by Guelph & Area Right to Life*

**Guelph & Area Right to Life has speakers available to guide your class through important discussions on the life issues. Topics including abortion, euthanasia, and the ethics of reproductive technologies or stem cell research are approached from the foundation that all human life has intrinsic value.**

## Pro-Life 101: Human Rights for All Human Beings

This talk introduces students to a biological and logic-based understanding of unborn children as human beings. Through dialogue with the students, we explore the issue of abortion through the lens of human rights. Commonly asked questions about abortion are addressed.

## Prenatal Development: Life in the Womb

Using videos, visual aids, and hands-on interactivity, students are guided through the amazing process of prenatal development.

## Gendercide: A Worldwide Issue

'Gendercide' is the systematic targeting of girls for abortion or infanticide, and takes place both locally and globally, especially in places where a cultural preference for sons exists. Students will be provided with the facts on this global issue, and will discuss how it relates to women's rights.

## In the Curriculum:

*Pro-Life 101* can be presented in a Bible class, to more deeply explore topics such as love of neighbor or the sixth commandment. It is also suitable for social studies courses that discuss human rights and social justice.

*Fetal Development: Life in the Womb* is an in-depth supplement to any biology course that discusses human development or systems of the body.

*Gendercide: A Worldwide Issue* fits well into high school social studies courses that discuss human rights and social justice.

## Other Topics:

Presentations are also available on topics such as euthanasia & assisted suicide, reproductive technologies, and stem cell research.

Please contact the Guelph & Area Right to Life office for more information.
